EDOGAWA GOSEI launches “POM PRIMER”

The first domestic primer specifically designed to achieve excellent adhesion to POM materials

1-Part / Polyolefin Resin / Room-Temperature Curing

EDOGAWA GOSEI (Head Office: Saitama, Japan / CEO: Koji Shinohara) has developed and commercially launched POM PRIMER, an innovative solution that enables the application of paint to polyoxymethylene/polyacetal (“POM” hereafter). POM PRIMER is the first* commercial primer developed by a Japanese paint manufacturer specifically for application to POM.

* Based on interviews with domestic paint/ink manufacturers and coating-related companies and research by our company

Widely used in numerous industries for its heat resistance, mechanical strength, wear resistance, and self-lubricating properties, POM is lightweight and nearly as robust as metal. However, POM adheres poorly to coatings. Before, it required a special pretreatment process before paint could be applied. Thus, despite widespread acceptance as a material for components and products for which functionality is paramount, POM presented a challenge when the design and aesthetics of finished products are key considerations. We developed POM PRIMER to overcome this shortcoming. As an innovative primer characterized by strong adhesion to POM, POM PRIMER opens up a new world of possibilities for POM applications. In addition, POM PRIMER requires no dilution, resulting in easier handling and improved efficiency at work sites. POM PRIMER can also be used in combination with our topcoat paint products to improve the aesthetics, functionality, and value of finished products.
